Message

Dear Colleagues:

TOPIC 2006 (TOkyo Percutaneous cardiovascular Intervention Conference) attracted far more participants than in the year before last, thanks to the doctors, co-medical professionals and related corporations who supported this event. We would like to take this opportunity to express our heartfelt gratitude to everyone concerned.

TOPIC 2007 will be held in July 2007. The most important issue to which we must call the attention of the world is chronic total occlusion (CTO). As we are facing the era of drug-eluting stents (DES), and as their long-term effects are becoming evident, the importance of achieving initial success with percutaneous coronary intervention (PCI) and realizing complete vessel revascularization is increasing. Although the greatest obstacle to these is CTO lesions, we can cure many CTO cases in a minimally invasive manner if safe and sure PCI for CTO is established successfully. Actually, we have received the impression that the interest in PCI for CTO has been mounting rapidly among participants of the society meetings and live demonstrations held overseas in the last few years. Japan has traditionally been leading the rest of the world in this area, and with the development of new methodologies such as Controlled Antegrade and Retrograde sub-intimal Tracking (CART), has been progressing even further. TOPIC has been offering sessions focusing on the CTO issue for a long time, and our live demonstrations have been dealing with many CTO cases. TOPIC 2007 is expected to follow in the same footsteps.

The next issue we must address is DES. While it is expected that several types of DES will become available in Japan soon, further expanding the scope of PCI, DES has a limitation in function and poses some problems. We must pay particular attention to the fact that there are still many cases DES cannot fully cure, such as bifurcation lesions, and that DES has its own "dark side" of causing, for example, thrombosis. To solve these problems, cooperation with the international faculties is indispensable. It is our hope that the international faculties, who have a longer and richer experience in this area than we do, will report various data at TOPIC 2007.

We should also pay attention to the increasing interest in peripheral sessions among participants of the conference. Many people participated in the video live demonstration and training courses at TOPIC 2006. Although a full discussion as to the specific plan for TOPIC 2007 has not taken place yet, we are planning to offer more meaningful peripheral sessions.

While following the same basic direction as in the previous conferences, TOPIC 2007 will provide an opportunity for us to discuss how we can introduce full-fledged PCI in the near future and what efforts are needed to raise its scale. We look forward to seeing you in July.
